Data & Error bound

Preprocessing

Select 1D4R as default stencil (Sec. V-A~V-C)

Estimate local H_1-PSNR slope (Sec. V-D)

For each round in reverse order (Sec. V-G)

Select coefficient for each axis (Sec. V-D~V-E)

Trial-compress for all axis and QB order (Sec. V-F)

Select the best axis and QB order for the current round

Compare 1D4R with 1D6R (Sec. V-C)

Configuration plan, including stencil, axis and QB order (Sec. IV-B)

Compression

For each round and each block

Select coefficient for planned axis (1D4R only) (Sec. V-D~V-E)

Make predictions

Quantize residuals

Serialize QBs in the planned order

Huffman encoding and Zstd

Compressed Bitstream
