Data & Error bound

Preprocessing

Select 1D4R as default stencil (Sec. V-A~V-C)

Estimate local H_1-PSNR slope (Sec. V-E)

For each round in reverse order (Sec. V-G)

Select coefficient for each axis (Sec. V-E~V-F)

Trial-compress for each axis and QB serialization order (Sec. V-D)

Select the best axis and QB order for the current round

Compare 1D4R with 1D6R (Sec. V-C)

Configuration plan: stencil, axis and QB serialization order

Compression

For each block and each round

Select coefficient for planned axis (1D4R only) (Sec. V-E~V-F)

Make predictions

Quantize residuals

Serialize QBs in the planned order (Sec. V-D)

Huffman encoding and Zstd

Compressed Bitstream

Steps inherited from or closely analogous to those in the SZ pipeline

New steps introduced by ASZ
